| Area of the Project       | Web Application                                                               |
| Date of Submission        | 21-07-2026                                                                    |

**VeAssist - A Smart Assistance Platform for Naval Ex-Servicemen Families** is a responsive web-based assistance and case management system designed to support the families of Naval Ex-Servicemen following the death of a veteran. During this difficult period, family members are required to complete multiple formalities related to pensions, insurance, ECHS, and other welfare benefits through different departments. The lack of centralized guidance, scattered information, and complex documentation often leads to confusion, delays, and missed benefits.

VeAssist addresses this challenge by providing a unified platform that assists families throughout the post-death support process. The system generates a personalized checklist of eligible benefits, provides clear guidance on required procedures and documents, securely manages important records, tracks the progress of assistance cases, and enables Welfare Officers to verify documents, coordinate with concerned authorities, and update case status. An AI-powered assistance module further enhances the platform by providing personalized guidance, intelligent document suggestions, and smart reminders. The application does not replace existing government systems but functions as a centralized assistance and case management platform that simplifies coordination between families, Welfare Officers, and relevant authorities.
